Full-Stack Systems Engineer

Automation • Real-Time Systems • Backend & Platform Development

Full-stack engineer specializing in building production-grade internal platforms and real-time operational systems. Experienced in designing APIs, data models, and workflow-driven applications using Python, FastAPI, PostgreSQL, and React. Proven ability to own systems end-to-end, from frontend interfaces to backend services and Linux-based deployments. Focused on solving real-world coordination, automation, and data flow challenges through scalable software.

PROFESSIONAL EXPERIENCE

Republic EMS — Magnolia, TX

Logistics Manager (Full-Stack Systems & Automation) | 2024–Present

- Designed and deployed production internal applications supporting dispatch, scheduling, compliance, and inventory workflows across all stations.
- Architected a rules-based scheduling engine (Python/PostgreSQL) enforcing staffing constraints including role pairing, rest windows, and consecutive shift limits.
- Built dispatcher-to-crew communication tools (PWA + React Native) enabling push notifications, SMS integration, and tap-to-route navigation.
- Designed and launched MediCheck/REMSCheck, digitizing inspection workflows with expiration tracking, structured data capture, and reporting exports.
- Developed payroll data consolidation workflows and executive dashboards improving overtime visibility and pay-period comparison analysis.
- Managed Linux production infrastructure (Ubuntu, systemd) with secure access via Cloudflare Tunnels and Tailscale.

- Partnered directly with executive leadership to identify inefficiencies and design scalable operational systems.
-

BlueWave Express Car Wash — Houston, TX

Operations Data Analyst | 2018–2023

- Designed multi-site financial and operational data models supporting leadership decisions across all locations.
 - Built and deployed a centralized Microsoft Access database to standardize vehicle damage and claims tracking, improving auditability.
 - Consolidated multi-source sales and traffic data using SQL and advanced Excel modeling to ensure reporting accuracy.
 - Developed dashboards tracking traffic volume, revenue trends, and site-level performance metrics.
 - Served as liaison between operations, finance, and vendors by translating raw datasets into actionable insights.
-

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, FastAPI, SQL, React, Node.js (basic)

Databases: PostgreSQL, Microsoft Access, relational data modeling, query optimization

Infrastructure: Ubuntu Linux, systemd, Cloudflare Tunnels, Tailscale, Docker

Data & Analytics: Advanced Excel, Power Query, Dashboard Design, Workflow Automation

Core Strengths: Systems Architecture, Operational Automation, Process Redesign, Cross-Functional Problem Solving

EDUCATION

Bachelor of Science in Political Science

Texas A&M University
